

`echidna SPEC :: plot_quadrature`

1. Show positions used in adaptive quadrature calculation of virtual casing.
2. The virtual casing method used in `SPEC` employs an adaptive quadrature method. For debugging etc., the points used in the adaptive method and contour plots of the various integrands are displayed by this routine.
3. This action is initiated by clicking ‘q’ on the `miscellaneous` window (see `plot_misc_event`).
